PROJECT OVERVIEW: END-TO-END PROCUREMENT FLOW

LCGC RFQ is an enterprise-grade web platform developed for Radiant Appliances & Electronics to automate, track, and streamline the complete non-production (NPP) and production material procurement cycle. From initial requirement raising to vendor bidding, technical/commercial evaluation, approval matrix hierarchy, and purchase order fulfillment.

Ø<ßÛþ CORE SYSTEM MODULES & TOUCHPOINTS

1. NPP Requisition & BOM
Material/service requests raised by departments with item codes, specs, target dates, and budgets.

2. RFQ Engine & Vendor Portal
Auto-generates tenders; vendors submit unit rates, GST, HSN codes, technical datasheets, & attachments.

3. Cost Comparison Matrix
Real-time L1/L2/L3 auto-ranking, commercial evaluation with prefilled rates and negotiation logs.

4. PR Approval Matrix
Sequential & Parallel approval chain with strict role permissions, days pending alerts, and sign-offs.

5. Purchase Order (PO)
Instant 1-click PO generation with 100% prefilled data, vendor acknowledgement, and PDF dispatch.

6. EP Approval & Expenses
Early Payment and expense approval workflows with real-time SheetJS/PDF viewers and direct email sharing.

Ø=Ý THE 4 IMPLEMENTATION & PROCUREMENT PHASES

PHASE 1

Requisition & RFQ Float

Internal demand raising, technical specs attachment, manager validation, and multi-vendor RFQ publishing.

PHASE 2

Vendor Quotation & Bidding

Secure vendor portal submission, GST/HSN, commercial rates, Excel/ PDF catalog upload & negotiation.

PHASE 3

Cost Comparison & Approvals

Automated L1/L2/L3 cost matrix, PR/ EP multi-stakeholder sequential/ parallel approval chains.

PHASE 4

PO Release, Fulfillment & Pay

Automated PO generation, dispatch, vendor acceptance, delivery tracking, GRN, & 3-way invoice matching.

ENTERPRISE ARCHITECTURE & COMPATIBILITY:

- Frontend: Angular 21 (Standalone Components, RxJS, SheetJS XLSX interactive spreadsheet rendering, jsPDF engine, responsive UI)
- Backend: Node.js & Express REST API, MongoDB Database, JWT Authentication, Nodemailer with automated PDF attachments
- Security & File Engine: Full-screen multi-format document viewer for PDF, Excel (.xlsx/.xls), Word (.docx), CSV, and Images (JPG/PNG).

LCGC RFQ & NPP PROCUREMENT PLATFORM

PHASE 1 & PHASE 2 DETAILED WORKFLOW | Radiant Appliances & Electronics

CLIENT ARCHITECTURE & WORKFLOW SPECIFICATION

Ø=ÜÝ PHASE 1: REQUISITION CREATION & RFQ FLOATATION (’é>•) •ù5•" (“ù5“ù&“â “™M“Y>’,•

Phase 1 initiates the procurement process from the internal requesting department (e.g. IT, Production, Maintenance, Stores). It ensures that before any vendor is contacted, internal requirement validation and budget allocation are finalized.

Step 1.1	**NPP Requisition Raising** User submits item requirement (part code, detailed description, required quantity, units of measure, target required date, and estimated budget).
Step 1.2	**Specification & Drawing Upload** User attaches engineering drawings, technical datasheets, or Excel BOM files. Supported files include PDF, XLSX, DOCX, and high-res images.
Step 1.3	**Department Head Verification** Request is routed to the department manager/head. Manager can approve, request clarification, or reject before RFQ floatation.
Step 1.4	**RFQ Generation & Vendor Selection** Procurement head converts validated requisition into an official Request for Quotation (RFQ). Vendors are selected from verified supplier database.
Step 1.5	**Automated RFQ Dispatch** System generates official RFQ document with RFQ-ID, floats email notifications with deep portal link, submission deadline, and legal terms.

Ø=Ü¼ PHASE 2: VENDOR BIDDING, QUOTATION & NEGOTIATION (“Y?‘YM“ G’I> ’ÉK“)@ •ù5•" &“ *”Ù0“

Phase 2 empowers suppliers through a dedicated Vendor Self-Service Portal. It guarantees full transparency, eliminates manual email follow-ups, and prevents quotation manipulation by recording all vendor prices directly in the digital database.

Step 2.1	**Vendor Portal Access** Vendors authenticate via secure email/OTP verification to view invited RFQs with all technical specifications and drawing attachments.
Step 2.2	**Commercial Quote Entry** Vendor enters itemized Unit Basic Price, applicable GST rate (0%, 5%, 12%, 18%, 28%), HSN code, Part Description, and payment terms.
Step 2.3	**Document & Catalog Attachment** Vendor uploads official signed quotation, technical compliance sheet, warranty declaration, and test certificates (.pdf, .xlsx, images).
Step 2.4	**Interactive Excel/PDF Preview** Integrated SheetJS and multi-format viewer allows procurement officers to immediately preview vendor uploaded Excel sheets and PDFs without download.
Step 2.5	**Negotiation & Revision Rounds** Procurement can send queries or request price revisions. Vendors submit Round 2 / Revised bids with full revision audit history maintained.

HIGHLIGHTS FOR CLIENT / MANAGEMENT IN PHASE 1 & 2:

- 100% Paperless: All item specifications, drawings, and vendor rate quotes are centrally stored.
- GST & Landed Cost Transparency: Automatic calculation of Landed Price = Basic + Packing + Freight + GST.
- Supplier Compliance: Vendors cannot submit bids after the closing date, preventing unethical price leaks.

Ø=ÜÊ PHASE 3: AUTOMATED COST COMPARISON & APPROVALS (’éB“)M’ò $” 2’‰> •ù5•" ’‰A’éK’i()

Phase 3 is the critical commercial intelligence and decision-making engine. It automates vendor evaluation through comparative matrices and routes requests through a strict multi-stakeholder approval hierarchy (Sequential & Parallel).

Step 3.1	**Comparative Statement (CS)** Automated side-by-side comparison of all participating vendors. Real-time ranking identifies L1 (Lowest), L2, and L3 bids automatically.
Step 3.2	**Prefilled PR Generation** Once L1 vendor is selected, complete technical & commercial details (Rate, GST, HSN, Part Desc) are prefilled into the Purchase Requisition (PR).
Step 3.3	**Dual Approval Logic (Parallel & Sequential)** Supports both Parallel (any or all parallel members) and Sequential (stage-by-stage sequential escalation: Engineer -> Head -> VP -> Director).
Step 3.4	**Strict Approval Rule (All Must Sign)** Unless every single stakeholder in the approval chain approves, status stays "In Process". Only upon 100% approvals does it switch to "Approved".
Step 3.5	**Active vs Status Tab Auto-Segregation** Approved requests are instantly moved out of the active "Requests" tab and archived into the "Status" tab for audits and history.
Step 3.6	**Aging & Days Pending Tracker** Real-time badge indicates exact days pending for each approver (e.g. #ó 5 Days), highlighting bottlenecks for rapid follow-ups.

Ø=Üe APPROVAL CHAIN HIERARCHY MATRIX (“‰M“Y@‘YC’I? “iM“ C•) “)> ’©M“ ”Ù0“ù/“â•

1. Department Requisitioner	Initiates request with title, department, estimated amount, vendor quote & attachments.
2. Section Manager / Engineer	Sequential / Parallel: Technical review of specifications, consumption pattern & budget.
3. Purchase Head / Head - Purchase	Commercial rate negotiation validation, L1 pricing audit, payment terms verification.
4. VP-Operations / Finance Head	Overall budgetary clearance & capital expenditure sanction.
5. Managing Director (MD / Director)	Final corporate sanction for high-value purchases exceeding delegation of power (DoP).

ADVANCED EP (EARLY PAYMENT / EXPENSE) CAPABILITIES:

- Instant PDF Preview & Download: Approvers can preview official PDF in-browser or download formatted EP reports in one click.
- One-Click Print Format: Generates a print-ready official company report with full audit history and signatures.
- Direct Fast Email Share: Input any recipient email address to immediately send the complete approved record and official PDF report.

Ø=Üæ PHASE 4: PURCHASE ORDER (PO), FULFILLMENT & AUDIT (‘YM“ / •i&”y6 •ù5•" *”)0”Ù$“ò•

Phase 4 represents the final execution and operational fulfillment stage. It automates the transition from approved requisition into a legally binding Purchase Order (PO) and tracks goods receipt, invoice reconciliation, and vendor payments.

Step 4.1	**Zero Re-entry PO Creation** Approved PR/EP automatically converts into a PO. All items, descriptions, quantities, unit prices, GST, HSN, and vendor addresses are 100% prefilled.
Step 4.2	**PO Dispatch & Vendor Email** System compiles branded Purchase Order PDF and sends it directly to the vendor with delivery schedules, billing instructions, and payment terms.
Step 4.3	**Digital Vendor Acceptance** Vendor logs into portal, clicks "Accept PO" and commits delivery dates. Acceptance timestamps and status update live on dashboard.
Step 4.4	**Goods Receipt Note (GRN) & DQMS** Upon factory delivery, stores team performs gate entry, quantity check (GRN), and quality team conducts inspection in DQMS module.
Step 4.5	**3-Way Invoice Matching & Pay Advice** System automatically matches Purchase Order + GRN + Vendor Invoice. Finance team releases Payment Advice with zero discrepancies.
Step 4.6	**Executive Analytics & MIS Reports** Management dashboards display procurement turnaround time (TAT), price savings, supplier performance ratings, and department spend analytics.

Ø<ßÆ KEY BENEFITS & CLIENT ROI MATRIX (‘yM“ >“™ ‘YG “)?•ò .” ”Ù/ “)>’Ò•

BENEFIT PARAMETER	MEASURABLE IMPACT	BUSINESS ADVANTAGE
Procurement Turnaround Time (TAT)	**Reduced by 65%**	Manual paperwork, physical signatures, and email chasing eliminated.
Cost Savings & Commercial Control	**8% - 14% Savings**	Transparent competitive vendor bidding and automated L1 ranking.
Approval Accountability & Auditing	**100% Traceability**	Every decision recorded with date, time, IP, designation, and remarks.
Data Integrity & Human Error	**Near Zero Errors**	Zero re-entry: data flows smoothly from RFQ -> Vendor -> PR -> PO.
Document Accessibility & Viewing	**Instant In-App View**	Interactive SheetJS for Excel, native PDF viewer, Word, and images.

DOCUMENT INFORMATION & CLIENT SIGN-OFF:

- Document Version: 2.4.0 (Enterprise Release) | Date: September 2026 | Status: Fully Implemented & Tested
- Prepared For: Client Management & Executive Procurement Review (Radiant Appliances & Electronics / LCGC)
- System Verification: End-to-end integration verified across all 4 procurement phases with 0 errors.
